WORK EXPERIENCE

System Developer, Operations team

SiteHost

July 2023 - current Full time

📍 Auckland

Technical support and maintenance for:

- Docker Cloud Containers
- Linux VPS
- cPanel
- Plesk
- Windows servers

Key day to day responsibilities:

- high uptime assurance
- performance optimization
- proactive solutions for business success
- customer service
- monitoring czar

Monitoring and Incident Response

- "Monitoring czar": receiving and triaging alerts across various server environments to ensure minimal downtime.
- Troubleshoot and resolve critical issues in real-time, including server crashes, performance bottlenecks, container failures, and other infrastructure problems, ensuring efficient service delivery across all platforms.
- System configuration and automation using Ansible, improving productivity and streamlining service delivery.

Proactive Support and Optimization

- Customer environment monitoring to identify patterns in server performance and usage, proactively reaching out to clients to recommend server optimizations, database tuning, and application-level improvements.
- Regular analysis of customer infrastructure to suggest tailored solutions for cost optimization, resource scaling, and overall system performance.
- Custom cloud container infrastructure maintenance based on Docker, ensuring scalability, reliability, and alignment with best practices.

Mentoring and Leadership

- New team members mentorship, providing training and guidance on core operations, troubleshooting methodologies, and best practices for customer support.
- Point of contact for the team in my manager's absence, ensuring continuity of service delivery and maintaining high-quality support.

Customer Interaction and Support

- Primary support contact for customers, handling a wide range of inquiries via phone, email, and ticketing systems.
- Customer assistance with password resets, billing issues, and product recommendations to meet their evolving needs.
- Long-term customer relationships by ensuring all concerns are addressed promptly and effectively, ensuring high levels of customer satisfaction.

Documentation and Process Improvement

- Development of internal documentation, knowledge base articles, and customer-facing guides, improving team efficiency and empowering customers to self-solve common issues.
- Internal processes refinement to optimize team workflows, reduction of resolution times, and overall customer support experience improvement.

Cross-functional Collaboration

- Collaboration with sales and product teams to gain insights into customer needs and provide feedback on potential improvements or new product offerings.
- Feedback loops engagement to improve service delivery and better meet customer requirements, providing actionable insights based on recurring support challenges.

PASSION PROJECT

Email Tester SaaS Platform

themailhero.com

Full-Stack Development:

- Built complete SaaS application using ASP.NET Core 9 (C#) backend with RESTful API, JWT authentication, Entity Framework Core, and React 19 frontend with TypeScript and Tailwind CSS

DevOps & Infrastructure:

- Implemented multi-server architecture across two VPS instances using Docker, automated deployments with Ansible, and GitHub Container Registry integration

Custom Monitoring System:

- Developed comprehensive monitoring solution using Prometheus, Grafana, Alertmanager, and Node Exporter with real-time mobile notifications via ntfy.sh

Production-Ready Features:

- Implemented enterprise-grade security with rate limiting, CAPTCHA protection, automated SSL management, daily backups, and zero-downtime deployments

Email Domain Testing:

- Created real-time SPF, DKIM, and DMARC record validation with instant results and responsive UI design

TECHNICAL SKILLS

Programming & Development

- C#, ASP.NET Core 9
- JavaScript, TypeScript
- React 19, HTML5, CSS3
- Tailwind CSS
- Entity Framework Core
- RESTful APIs
- JWT Authentication

Infrastructure & DevOps

- Docker, Ansible
- Linux (Ubuntu/CentOS)
- Windows Server
- Nginx, Apache
- SSL/TLS, UFW Firewall
- GitHub Actions
- Container Registry

Monitoring & Observability

- Prometheus, Grafana
- Alertmanager
- Node Exporter
- Custom monitoring solutions
- Real-time alerting
- Performance optimization

Databases & Cloud

- SQLite, MySQL, PostgreSQL
- Database tuning
- Cloud containers
- VPS management
- cPanel, Plesk
- Backup strategies

Security & Best Practices

- Rate limiting
- Input validation
- CAPTCHA integration
- CORS configuration
- Security hardening
- Automated SSL management

Customer Support & Communication

- Technical troubleshooting
- Incident response
- Customer service
- Documentation
- Knowledge base creation
- Team mentoring
